**AMENDMENT TO THE CLAIMS** 

This listing of claims will replace all prior versions and listings of the claims

in the application.

1. (Currently amended) An intermediate composite part designed for forming

a composite reinforcement prosthesis and comprising:

i) a porous textile support which includes an arrangement of threads each

composed of at least one filament of nonabsorbable polymer material, said textile support

defining the a free edge or edges of the part, and

ii) a hydrophilic absorbable material covering said textile support, at least on

one side of the latter, extending across the surface of what is called a protected zone and

creating, on each side of the latter, two unprotected zones of the textile support which are

limited by said free edges and are devoid of any of said absorbable material,

wherein the absorbable material is selected from the group consisting of

modified collagens, polysaccharides, and their mixtures.

2. (Original) The part as claimed in claim 1, wherein the arrangement of

threads constitutes a knitted structure.

3. (Original) The part as claimed in claim 1, wherein the textile support

constitutes a two-dimensional structure.

4. (Original) The part as claimed in claim 1, wherein the nonabsorbable

polymer material is chosen from the group comprising polypropylenes, polyesters,

Filing Date: October 23, 2003 Docket: BR040495 (1600-24)

polyamides and/or their mixtures.

5. cancelled.

6. (Original) The part as claimed in claim 1, wherein the absorbable material

covers the textile support on both of its sides.

7. (Original) The part as claimed in claim 1, wherein the absorbable material

covers the textile support by means of a membrane linked to the textile support by bonding

and/or partial impregnation.

8. (Original) The part as claimed in claim 1, wherein the textile support

defines a microporosity and a macroporosity.

9. (Original) The part as claimed in the claim 8, wherein the absorbable

material covers the textile support by means of a coating which occludes the microporosity of

the textile support.

10. (Original) The part as claimed in claim 9, wherein the coating also

occludes the macroporosity of the textile support in a zone called the occluded zone.

Filing Date: October 23, 2003 Docket: BR040495 (1600-24)

Page 5 of 12

11. (Original) The part as claimed in claim 1, wherein said part is

rectangular, and wherein the protected zone represents a central band of said part.

12. (Original) The part as claimed in claim 10, wherein said part is

rectangular, and wherein the occluded zone represents a central band of said part.

13. (Original) Use of the intermediate composite part as claimed in claim 1,

for obtaining a composite reinforcement prosthesis.

14. (Original) Process for obtaining a composite reinforcement prosthesis,

wherein: i) an intermediate composite part as claimed in claim 1 is obtained, ii) the

composite part is cut out along a cutting line defining in this part at least two zones of tissue

attachment, on each side of a zone of tissue support, the attachment zones being cut out from

the two unprotected zones, respectively, and the tissue support zone being cut out from the

protected zone.

15. (Original) The process as claimed in claim 14, wherein the cutting line

defines a strip with straight parallel edges.

16. (Original) The process as claimed in claim 14, wherein the cutting line

defines a strip with parallel edges curved in an arch.

Filing Date: October 23, 2003 Docket: BR040495 (1600-24)

Page 6 of 12

17. (Original) The process as claimed in claim 14, wherein the cutting line defines a strip with nonparallel edges, which is bulged in the central region and narrower at the ends.
